## PROFILE

4th-year Control and Automation Engineering student at Yıldız Technical University, dedicated to bridging Control Theory with modern AI. Focuses on developing intelligent, data-centric systems that merge mathematical modeling with adaptive software architectures.
Possesses strong competencies in Generative AI, RAG (Retrieval- Augmented Generation), and Machine Learning workflows.
Experienced in integrating stochastic estimation (Kalman Filtering) with predictive modeling and building scalable automation frameworks to optimize system performance.
Combines an analytical mindset with a passion for Deep Learning and ROS, aiming to apply predictive analytics and algorithmic problem-solving to create impactful, data-driven technologies.

## EXPERIENCES

**Engineering Intern,** *ENKO* — 03/2026 – 06/2026

**Engineering Intern,** *Adatech* — 06/2025 – 09/2025

## EDUCATION

**Control and Automation Engineering,** *Yıldız Technical University* — 2020 – 2025

**Fener Rum High School** — 2016 – 2020

## SKILLS

- Context Engineering
- LLM & Generative AI
- Adaptive Algorithms
- Data Process & ML Pipeline
- REST API, CI/CD
- Python

## LANGUAGES

**English**
C1

**Greek**
Native

**Turkish**
Native

## HOBBIES

- Cooking
- Skiing
- Physical acitivies

## PROJECTS

**Designed an ML-powered system with XGBoost algorithm to predict employee turnover and visualize team dynamics.**

**Kalman Filter Based Trend Analysis**

**Extended Kalman Filter-Integrated Fuzzy-CTC Control for 2-DOF Robot Manipulator**

**Membership in YILDIZ Rover Project**

## CERTIFICATES

- - Control Design Onramp with Simulink
- - Simulink Onramp MATLAB Onramp
- - IEEE - Power in Energy
- - IEEE - RLC Days
