SUMMARY

Control and Automation Engineer specializing in the convergence of classical Control Theory and modern Generative AI architectures. I build intelligent systems that bridge hardware control logic with autonomous AI, leveraging a strong foundation in state estimation and stochastic modeling to drive scalable, data-centric workflows.

Core Focus Areas:

- Architecting robust RAG pipelines and LLM orchestration frameworks.
- Training and optimizing ML models (XGBoost, Neural Networks) for predictive analytics.
- Engineering data ingestion pipelines to transform raw hardware/sensor metrics into actionable AI features.
- Developing high-load, production-ready backends using Python, FastAPI, and Docker.

PROFESSIONAL EXPERIENCE

ADATECH, AI Engineering Intern

06/2025 – 09/2025

Guzelyalı, Istanbul

- Architected and deployed "AI-Powered People Analytics," a data-driven HR evaluation dashboard.
- Built an XGBoost predictive model achieving 91.7% accuracy in early turnover risk detection.
- Engineered data-driven workflows that improved workforce allocation efficiency by 15%.

ENKO, AI/ML Engineering Intern

03/2026 – 06/2026

Beykoz, Istanbul

- Evaluated PLC architectures and mapped sensor data flow across industrial protocols (e.g., Modbus, MQTT).
- Engineered telemetry data ingestion pipelines to feed downstream predictive maintenance ML models.

EDUCATION

Control and Automation Engineering (GPA: 3.01 / 4.00), Yıldız Technical University

2020 – 2026

Fener Rum High School

2016 – 2020

SKILLS

- AI/ML:** PyTorch, XGBoost, LangChain | **Infrastructure:** ROS, Docker, Kubernetes, CI/CD, FastAPI, Simulink |
- Languages:** Python, C/C++, MATLAB | **Data:** ChromaDB, Qdrant, Pinecone, Neo4j, Voyage

LANGUAGES

English: C1 | Turkish: Native | Arabic: A2 | Greek: Native

PROJECTS

2-DOF Robot Manipulator, EKF-Integrated Fuzzy-CTC Control, Graduation Thesis

- Developed a hybrid architecture combining Computed Torque Control (CTC) — with adaptive states trained via ANNs — and Fuzzy logic to dynamically compensate for non-linear uncertainties.

Matchfluence, Influencer Marketing Marketplace

- Engineered the scalable backend infrastructure for a B2B SaaS platform utilizing Supabase.

Life OS, Agentic Knowledge System

- Architected a personal knowledge operating system utilizing Neo4j graph databases for complex semantic relationship mapping.

CERTIFICATES

Hugging Face NLP Course Certification | DeepLearning.AI (Andrew Ng) - LangChain / RAG Course | MATLAB: Simulink, ML
